

# The perfect lover

**A sex toy with learning ability? There's no such thing. Oh yes there is! It's called "SaSi" and has been causing a sensation throughout the industry for several months, due to its uniqueness. So it is high time to explain just how this magical device works.**

Normally this world is shaped by continuous development. Nature has shown the way with the theory of evolution. Everything develops step by step. But sometimes one of these stages is leap-frogged. This generally produces a mutation that is unique. And it's exactly this kind of jump up the ladder of evolution – at least as far as the adult industry is concerned – which has been achieved by the company Je Joue with their massage device "SaSi".

But what on earth is so special and unique about the "SaSi"? The shape of the toy is, in a way, similar to that of a computer mouse, is

It's all about innovation: "SaSi"

easy to handle and simple to operate. But that is not really new. The power switch is located in the top third of the device, where it is easy to reach with ones fingers; also not really that unusual. Oh yes, and it can also vibrate if needed. This is optional but not essential. And now we are in the wonderful new world of the "Sasi". Compared to every other massage device, vibration is not this toys main source of stimulation, but instead with a type of mini tongue, which is hidden under a silicone cover, and is capable of many different movements.

The control panel around the power switch offers even more usage possibilities for the "SaSi". If you push left, a green lamp lights up, this displays the favourite's mode. This is where one can individually access (by

pushing left or right) five preassigned movements and also regulate the speed (with the up and down buttons). And if that isn't enough, there is also three levels of vibration and two pulse vibrations (controllable with the top button).

This all sounds too good to be true, but it gets even better! If you press the button on the right after switching it on, you enter the learn mode, which plays the movements automatically, changing them every 20 seconds. By pressing the various buttons (Middle: stay with the movement, right: next movement, left: previous movement), you can tell the "SaSi" what you enjoy and what you don't like. Once the device has been switched off after use, it updates and saves exactly the combination you pressed before. The next time you use the toy in that particular mode, it will firstly play the preferred movements, providing one with a perfect and highly individual stimulation – thanks to years of research and the implementation of the latest mobile phone technology. This makes the "SaSi" the first toy with learning ability and because of this, comes pretty close to being the perfect lover; at least closer than most human tongues can get.

When reading this, you may think that some of the various functions are a little complicated, but that is not the case. First of all, the "SaSi" is delivered along with a comprehensive and picture illustrated instruction manual, which explains everything simply and in detail. For those who prefer to learn visually, Je Joue has included a video on their company website, which shows all there is to know about the "SaSi". But

generally speaking, you could just take it to bed and try it out intuitively, because all of the controls can be reached with ones fingertips, even without seeing them. The care and maintenance of the "SaSi" is just as simple. The upper hard-plastic casing can be removed with only minimal pressure, in order to be able to remove the silicone cover for cleaning. But it is only recommended to use a damp cloth, as the technology inside the "SaSi" is splash – but not waterproof. Thanks to the mains plug, which is delivered with the product, the toy is also very easy to recharge. And this applies to every country throughout the world, as the package also includes adapters. This means that your perfect lover can easily be taken on business trips or on vacation.

But who developed the "SaSi"? Who is the person behind the company Je Joue? How did they come up with an idea that has never been seen before? But above all: Where can one buy this magical toy? At this point I will have

to keep you in suspense for a little while longer, because these questions will all be answered in the July issue of Sign Europe. But for those that don't want to wait that long, you can check out [www.jejoue.com/instructions](http://www.jejoue.com/instructions), or send an Email to [sales@jejoue.com](mailto:sales@jejoue.com).
